# Easy public sector tariffs

We've created three new mobile voice and data tariffs that are easy to understand and flexible enough to meet the needs of all your users. They're available on Direct Award under the Network Services Framework (NSF), which provides a quick and compliant procurement route.

Security is central for the public sector and to O₂ and we're the first mobile network provider to be certified to CESG's CAS(T) standard. And we provide secure device return and data wiping for all handsets through O₂ Recycle at no extra charge, with any residual value paid back to you.

## What are they?

**Voice only** – these come in two types: an all-inclusive package for £4.50 per month, which includes unlimited calls and text messages to UK mobiles and landlines, and a zero-line-rental option that has competitive rates suitable for infrequent users.

**Voice and data** – this entry-level tariff is ideal for users who have modest data needs or who are more likely to use wifi than 4G to access digital services. It's available as a simple, fixed charge per user for £5.50 per month for 100MB of bundled data or £7.50/month for 500MB of bundled data. With unlimited voice and text messaging, there are no bill shocks, as data usage is capped each month, so users can't inadvertently incur additional charges.

**No.10 Tariff** – this is exclusive to the public and third sectors and gives users £100 towards a device and access to unlimited voice and secure 4G data. All for just £10 per user per month. There is also the option of adding data aggregation for just £2 per month per subscription, which can be shared across your connections.

## It's easy

Switching from your current contract is easy – we'll do everything for you. And these tariffs are only available on the NSF for public and third sector organisations. At the end of the term, you'll have the option to keep the devices or upgrade to new ones. Or hand them in to O₂ Recycle to get back some of their value.

## 4G-ready

With our voice and data tariffs and the No.10 Tariff, you get credit towards a 4G-ready device. This helps you accelerate your organisation's digital plans and enables your people to do more when they're out and about. 4G is being rolled out across the country for your benefit.

*Network Services Framework catalogue pricing (Jan 2016)*

\* If you prefer to cap your data allowance. Unavailable with Private APNs.
\*\* More information available here.

## What's an APN?

APN stands for Access Point Name. There are two types, Standard and Private, and your choice of tariff depends on your APN. When a device sends or receives data over a mobile network, the APN helps the network decide how to act and manage that data.

• Standard APN is the default and means we can track your usage and ensure there are no surprises, by alerting you to heavy usage or by capping your usage

• Private APNs give you more security by not using the public internet to connect to corporate data. However, we're unable to track usage when you're not using the public internet, and so are unable to provide alerts or domestic or roaming usage caps

## What's data aggregation?

Data aggregation is a new way to make better use of your company's data. For an additional £2 per month subscription, we will aggregate your entire organisation's individual data allowances into one big pot. That means it doesn't matter if some of your employees go over their limit, as they can use additional data from their community.

## Why O$_2$?

We provide a simple, transparent and cost-effective procurement process for all public and third sector organisations. From tablets and apps, to m2m connectivity and managed services, we have it all to offer. We're an approved provider through the NSF and G-Cloud 7 Framework, and are CAS(T) accredited.

## Get in contact

Give us a call if you have any questions or want to get started in switching over to one of our three public sector tariffs. Just call **0800 955 5590**, email **publicsector@businesso2.co.uk** or visit **o2.co.uk/publicsector**
