

O₂ Gateway

All your fixed, mobile and wifi services in one place

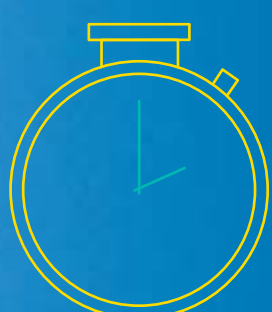

O₂ Gateway lets your people communicate and collaborate simply and quickly. It's the UK's first network that integrates fixed, mobile and wifi – delivering everything across a single, simple and secure platform. It works seamlessly with 3G and 4G, so there's no need for messy VPNs. O₂ Gateway also allows you to offer single-number services to your customers, making it easier for them to contact you – without the need to manage multiple contact numbers.

The O₂ Gateway network is CAS(T) certified. CAS(T) is a certification initiated by the UK Government. It's aligned with, and extends on, the requirements of ISO 27001, giving public sector customers the necessary assurances that the service is operated in line with current Communications Electronics Security Group (CESG) standards. This ensures that services operated and certified under this scheme are compatible with UK Government security requirements.

These requirements are, of course, also applicable outside of the public sector. All of our customers benefit from the reassurance that the services they use have been independently audited and proved to be highly secure.

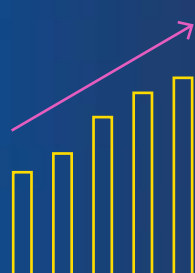

The truly innovative and robust nature of O₂ Gateway was recognised by the UK's leading information resource firm, Computing, at the 2016 Vendor Excellence Awards where O₂ Gateway received the 'Networking Infrastructure' award.

Rolling out apps and services through
O₂ Gateway can help your people:

Save time

9.4 million hours saved each week by UK organisations

Do more

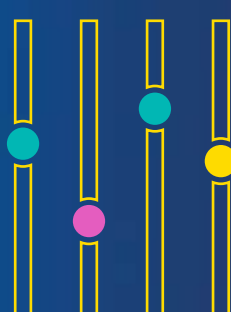

68% of employees say business technology makes them more productive

And helps your organisation:

Add to the bottom line

with £2.2 billion every week made by UK organisations through business technology

Increase flexibility

which is why 68% of senior managers say breaking the 9 to 5 leads to more success

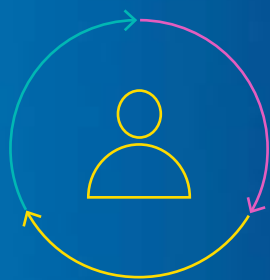

Reduce costs

by giving your ICT team just one end-to-end network from a single supplier to manage

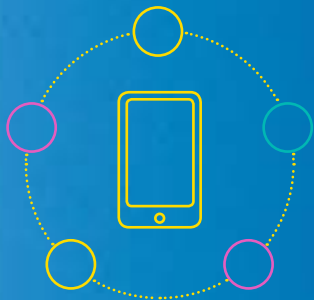

Be more secure

on our CAS(T)-certified network, keeping your people's work safe and your customers' data confidential

Drive transformation

and deliver great customer services, like free wifi

Deliver mobility

so your people can collaborate and communicate from anywhere

Build better user experiences

regardless of the device or connection your people choose
