

Security across the board

A decorative graphic on the left side of the page. It features a cluster of blue bubbles of various sizes floating upwards. Below the bubbles is a stylized illustration of a padlock with orange and yellow horizontal stripes, and a blue keyhole. A blue line, resembling a cable or a path, loops around the padlock and extends towards the right, passing behind a white box that contains the main text.

Check Point Security Solutions can protect your entire network and device estate from the risk of attack. Together with our professional services, you have access to the expertise and technology needed to remain one step ahead of the threat environment.

One-stop shop

Network and end-point security is critical for any business. And it's a big undertaking. Our research has shown that most organisations spread their security spend across eight or nine different technologies or partners.

This approach to security can be a bit too complicated, and using too many different suppliers can be risky.

Check Point Security Solutions has a centralised and unified security management console. This means you can pick from a broad range of key network and end-point security functions, and plug them into a single easy-to-use management console.

Plotting your security

With the help of our professional services we can ensure you get the right mix of protection and investment.

From the start we can assess your existing security setup and highlight where it may be letting you down.

We can then go on to plot the most effective security transformation to fully safeguard your organisation.

Stay ahead of the threat

The threat environment is constantly changing and it is crucial that you have the solution capable of rising to these changes.

Check Point's unique setup means you can plug in additional network and end-point security as needs change, with minimal configuration and disruption.

As an optional extra, you can deploy ThreatCloud, a cloud-driven, collaborative knowledge base that can deliver intelligence directly and in real-time.

Keeping over 23 million people safe

We have over 23 million customers, who trust us with their personal information.

We use Check Point Security Solutions to make sure we don't break this trust.

A different level of support

For the best fit, we like to provide customer support on a case-by-case basis, with a broad range of options as flexible as the solution itself.

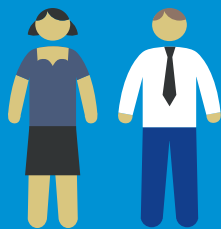

Why O₂?

O₂ has extensive experience of telecoms and business IT. This makes us a particularly capable and credible partner to manage communications systems security, and we provide you with a one-stop shop for your business security needs.

We offer simplicity. One bill, no matter how many security modules you have, available through our online portal: My O₂ Business.

And you'll get award-winning customer service.

And we'll support you all the way

You get one account team supporting you throughout. We'll keep in touch throughout the installation process, and will arrange an installation time that suits you. We'll let you know as soon as the service is active and provide 24/7 support for your IT helpdesk.
